

AI4TELCO HACKATHON · MTN NIGERIA CHALLENGE

RiskGuard AI

The agentic AI risk officer that watches every network, billing, and customer signal — and acts before the outage.

Detects

Predicts

Mitigates

Reports to NCC

Built on Microsoft Azure OpenAI + Semantic Kernel · AI Skills Week Lagos 2026

Microsoft · MTN Foundation Nigeria · Data Science Nigeria

Risk hides between the silos.

"Telecom operators rely on multiple, siloed data sources across network, sales, devices, and customer channels — making it difficult to identify operational risks early."

— MTN Nigeria, AI4Telco problem statement

Network & BTS

Cell health, throughput, latency

Billing & Revenue

Recharge, top-ups, leakage flags

Customer Channels

Complaints, social, contact centre

Devices & Sales

Activations, SIM swaps, IMEI

Result: service disruption • revenue leakage • customer churn • NCC penalties

Operators learn from Twitter — not dashboards.

47 min

average operator delay between first signal and confirmed incident

NGN-bn

regulatory penalties NCC has issued operators for QoS breaches in recent years

1 in 3

Nigerian subscribers say poor service is their #1 reason to switch network

Today's tools are dashboards. Dashboards wait to be looked at. Risk doesn't.

RiskGuard AI — an AI risk officer that takes action.

Not a dashboard. An always-on agent that **reads** every signal across network, billing, sales and customer channels, **predicts** the next breach, **recommends** a fix, and **files the NCC report** — with a human always in the loop.

1

Sense

Ingest 7 signal domains in real time

2

Reason

Agentic LLMs reason over grounded tools

3

Recommend

Compare actions vs. do-nothing, ranked

4

Report

Auto-assemble NCC-ready evidence pack

Four layers. One Microsoft AI stack.

1. Signal Ingest

Network, BTS, billing, recharge, sales, complaints, devices — normalized into one stream.

2. Risk Engine

Rolling z-scores, anomaly + co-occurrence, per-LGA score, time-to-breach, impact model.

3. Agentic Copilot

Semantic Kernel + Azure OpenAI. 5 role agents call grounded tools. ClaimValidator gates output.

4. Operator Console

Live risk map • incident panel • mitigation simulator • approval flow • NCC compliance pack.

From green to recovered in 90 seconds.

00:00

01:30

Risk = 42

Recovery confirmed • NCC
pack ready

Five specialist agents. Zero hallucinations.

Network Agent

Localizes the fault, pulls BTS evidence

Revenue Agent

Spots leakage in recharge & billing streams

Customer Agent

Reads complaints, projects churn risk

Mitigation Agent

Simulates options, ranks by impact + cost

Compliance Agent

Drafts NCC notes, assembles evidence pack

Every claim — every KPI, naira figure, subscriber count — must trace to a tool call. ClaimValidator strips the rest.

Trustworthy enough for regulators and CEOs.

Grounded answers

Agents only speak from tool results.
No CSV browsing. No free-form claims.

Human-in-the-loop

No mitigation runs without operator approval.
The approval IS the trigger.

Append-only audit

Every action is logged: who, when, why,
expected impact, actual outcome.

Regulator-ready output

NCC-format pack assembles in seconds,
straight from the audit trail.

Autonomous enough to be useful. Constrained enough to be deployed.

What one Ikeja-class incident looks like.

Per-incident operator outcome

Not a chatbot. Not a BI tool. A new category.

Legacy NMS Network monitoring	Generic LLM chat ChatGPT-style	RiskGuard AI Agentic risk officer
✗ Single-domain visibility ✗ Static thresholds ✗ No mitigation guidance ✗ Manual NCC reporting	✗ Hallucinates KPIs ✗ No live data tools ✗ No audit trail ✗ Not regulator-safe	✓ 7 signal domains fused ✓ Predicts breach 47 min ahead ✓ Recommends + simulates fix ✓ Auto-files NCC pack

And we built it on the host's stack: Microsoft Azure OpenAI + Semantic Kernel.

From hackathon to West African telco standard.

Business model: SaaS license per operator + per-incident NCC compliance fee. Avoids one ₦100m fine = pays for the year.

LET'S BUILD TELCO RESILIENCE FOR NIGERIA

RiskGuard AI

Detect risk earlier. Mitigate it faster. Prove it to the regulator.
